PROFILE

Results-driven full-stack developer with 3+ years building web and mobile applications, bots and automations that save hours of work and scale to thousands of users. Experience in the healthcare sector (remote, international) and in management, billing and inventory systems for businesses. I own the full backend → frontend cycle, build mobile apps with Flutter, and follow solid engineering practices (tests and CI). Clear communication in Spanish and English.

Automation & AI

SOFTWARE DEVELOPER

- Design and maintain web and mobile applications for an international healthcare company, including mobile apps with Flutter.
- Digitized key workflows, cutting the time spent on formerly manual, repetitive processes by ~80%.
- Collaborate in a distributed international team (fully remote) with Git, code review and continuous integration for frequent, stable deployments.

FULL-STACK DEVELOPER

- Build management, inventory and billing systems and finance apps with Supabase and Flutter, tailored to real business processes.
- Automate the processing of large data volumes and repetitive operational workflows with Python and APIs, removing ~21 h/week of manual work across clients.
- Write technical documentation and implement automated tests and continuous integration (CI) for reliable, maintainable deployments.

IT INTERN

- ATIT Area (Automation, Technology & IT).
- End-to-end hardware and software support: installation, preventive and corrective maintenance of equipment and workstations.
- Diagnosed and resolved end-user software issues, keeping the area's operations running.
- Network and server administration and support, including proxy configuration and connectivity.
- Supported automation and internal IT processes.

TECHNICAL LEAD

- Led end-to-end development of a web app used by 2,000+ residents, cutting data-lookup time by 80%.
- Secure CRUD in PHP/MySQL and a responsive UI → 97% satisfaction; CI/CD with GitHub Actions and weekly deploys with no downtime.

SYSTEMS ENGINEER

Graduated (official degree).

Python, PHP, JavaScript, TypeScript, HTML5, CSS3

React, Next.js, Vue, Tailwind CSS

Flutter (Dart)

FastAPI, Flask, Node.js, REST & GraphQL

MySQL, PostgreSQL, Supabase, MongoDB, Firebase

Git/GitHub, CI/CD (GitHub Actions), Docker, Vercel

Python bots, WhatsApp automation, ML (Scikit-learn, Pandas)
